CROP REPORTING BOARD

STATISTICAL REPORTING SERVICE • U.S. DEPARTMENT OF AGRICULTURE • WASHINGTON, D.C.

DEFINITION OF TERMS

Total Production - is the quantity actually harvested plus quantities which would have been acceptable for fresh market or processing but were not harvested because of economic reasons.

Utilized Production - is the amount sold plus the quantities used at home or held in storage.

Apples, Commercial Crop - is the production from orchards of 100 or more bearing--age trees.

Economic Abandonment - is the difference between total and utilized production which is mature fruit not harvested for economic reasons or excess cullage fruit.

Utilization - refers to first utilization, not necessarily final utilization. For example, frozen fruit included some fruit that may be later used for making preserves. Grade-outs for fresh market fruit which are processed are included in the processing quantity. Fruit graded-out from canning or freezing and utilized for juice is included with juice.

Prices - is a season average for all methods of sale. For a crop sold for both fresh market and processing, the season average price is a weighted average of the fresh and processing price.

Prices for fresh fruit, except as noted below, are the average prices producers receive at the point of first sale. This is commonly referred to as the average price as sold. Since the point of first sale is not the same for all producers, prices for the various methods of sale are weighted by the proportionate quantity sold. For example, if in a given State part of the fruit is sold f.o.b. packed by growers, part is sold as bulk fruit at the packinghouse door, and some is sold retail at roadside stands, the fresh fruit average price as sold is a weighted average of the average price for each method of sale.

Prices for fruit sold for processing are equivalent returns for fruit delivered to the processing plant door.

Exceptions to the above price definitions are:

(1) Fresh fruit sales in Washington and Oregon are equivalent returns at packinghouse door. The equivalent packinghouse returns represent adjusted prices. F.o.b. packed prices are adjusted down to an equivalent incoming packinghouse door price by subtracting all costs that accumulate between the incoming packinghouse door and the f.o.b. price. These costs include grading, packing, inspecting fees, selling, and other costs.

(2) Fresh prices shown for California represent returns at the first delivery point by the producer. The first delivery point price is defined as the price received by growers for fruit delivered at the local market, packinghouse, receiving shed, or any other first delivery point.

Value estimates in this report cover the marketing season or crop year or years and should not be confused with cash receipts from these crops for a single calendar year. The season average price for each State is applied to utilized production to compute value of production. The average price shown for the United States is obtained by dividing the U. S. value of production by the quantity utilized.

NONCITRUS FRUITS AND NUTS 1971-73 PRODUCTION, USE AND VALUE

This report contains preliminary utilization and value estimates for "late season" fruit and nut crops not previously reported. Most of these estimates were formerly published as Noncitrus Fruit Part II and Tree Nuts, Noncitrus Fruits and Nuts, 1973 Annual Summary published on January 14, 1974 contained preliminary end of season estimates of production, use, and value for "early crops" formerly published as Noncitrus Fruit Part I.

These changes reflect modifications in issuance dates and content for noncitrus fruit and nut statistics announced by the U. S. Department of Agriculture on October 4, 1973.

FRUITS AND PLANTED NUTS BEARING ACREAGE,
UNITED STATES

Year	Citrus	Major	Minor	Planted	Fruits and	
	fruits	deciduous	fruits	nuts	planted	
	1/	fruits 2/	3/	4/	nuts	
		1,000 acres				
1971	1,182.8	1,543.0	82.8	363.0	3,171.6	
1972	1,160.4	1,534.9	84.7	381.4	3,161.4	
1973 5/	1,181.7	1,531.4	87.2	396.4	3,196.7	

1/ Oranges, tangelos, tangerines, temples, grapefruit, lemons, and limes. Acreage is for the year of harvest.

2/ Commercial apples, peaches, pears, grapes, cherries, plums, prunes, and apricots.

3/ Nectarines, figs, olives, avocadas, dates, persimmons, and pomegranates.

4/ Walnuts, almonds, and filberts.

5/ Preliminary.

UTILIZATION OF PRODUCTION OF NONCITRUS FRUITS, AND VALUE, UNITED STATES 1/

Season	Utilized : production	Fresh	Processed					Value of utilized production	
			Canned	Dried	Juice	Frozen	Wine		Other
			1,000 tons					1,000 dollars	
1971	2/ 10,529	3,424	2,004	1,415	896	242	2,310	177	3/ 1,164,274
1972	2/ 8,429	3,123	1,801	795	729	249	1,520	152	3/ 1,319,655
1973	2/ 10,936	3,395	2,064	1,774	621	254	2,615	132	3/ 1,931,011

1/ Apples, apricots, avocados, bananas, bushberries, cherries, cranberries, dates, figs, grapes, nectarines, olives, papayas, peaches, pears, persimmons, pomegranates, plums and prunes. 2/ Includes culls and cannery diversions for California clingstone peaches, (tons): 1971-61,000; 1972-60,000; and 1973-81,000. 3/ Excludes culls and cannery diversions for California clingstone peaches.

TREE NUTS: PRODUCTION AND VALUE, UNITED STATES

Crop	Production			Value of production

1/ Differences between total production and production utilized are cranberries that were put in set aside under the Cranberry Marketing Order and other quantities not utilized. Cranberries put in set aside, but sold for export are included in production utilized.

2/ Cranberries paid for by processors and lost because of dehydration and berry breakdown after delivery.

3/ Equivalent returns at first delivery point, screened basis of utilized production.
